

ABSTRACT OF THE DISCLOSURE

When a portable receiving terminal is mounted on a cradle in an automobile, the satellite broadcasted contents is received by use of external antennas connected to the cradle, in place of built-in antennas contained in the portable receiving terminal. Accordingly, by use of the portable receiving terminal of the present invention, the satellite broadcasted contents can be surely received even in an automobile. Furthermore, the received information outputted from the portable receiving terminal can be transmitted to external devices such as car navigation system and the like when being mounted on the automobile. Accordingly, by taking advantages of a car navigation system, a car television and a car stereo mounted on the automobile, the information received by the portable receiving terminal can be displayed in a very lively manner.
